## My Hypothesis:

Pillbugs will move toward the choice chamber containing cornstarch, because they are attracted to cornstarch

## My Strategy:

I will add 5 pillbugs on the left and 5 pillbugs on the right and count the number of pillbugs on each side at regular intervals of time.

## Experiment Setup:

I will put cornstarch on one side of the chamber and fine sand on the other side of the chamber.

## Control Setup:

I will put sand on both sides.

## My Conclusion:

The pillbugs tend to move toward the cornstarch, and the control group shows they don't change behavior regarding sand.

## Collected Lab Data

Time (minutes)	# Bugs Upper-left	# Bugs Upper-right	# Bugs Lower-left	# Bugs Lower-right
0	5	5	5	5
2	6	4	5	5
4	8	2	4	6
6	9	1	4	6
8	9	1	6	4
10	10	0	5	5
12	10	0	4	6
